

COLLAGEN PRODUCTS OF ABP: UNIQUE FEATURES

Chemistry of Collagen Matrix

↓
Ideal type, among
all collagens

Type-I Collagen

Non-Immunogenic &
Highly Biocompatible

Phosphorylated Type-I Collagen

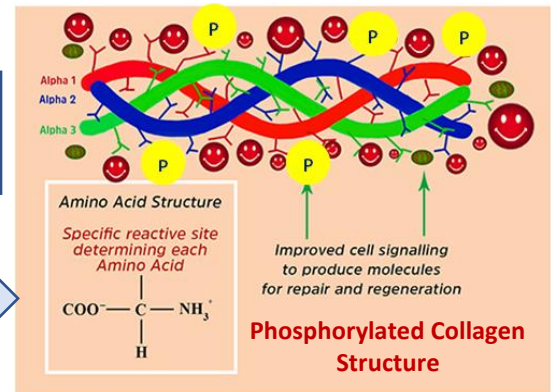

Undifferentiated stem cells
are attracted and converted to
particular cell line for tissue
repair/regeneration

When phosphorylated leads
to cell signal transduction
(There are 3 million google results
on this subject)

Highly Bioactive

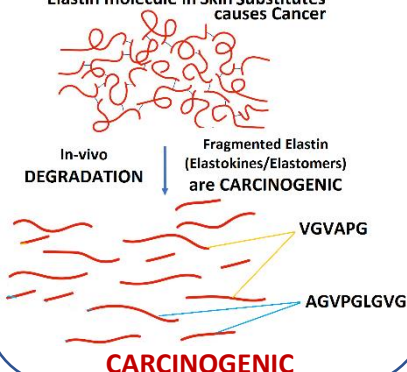

How is it Bioactive?
"Within 4 to 5 days
neovascularization, blood
vessels form. No other products
seem to show this feature."

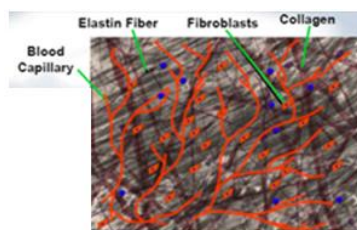

Impact of Matrix Structure & Chemistry

Intact Tissue Membranes Has 15-51% Elastin which is a carcinogen

Elastin molecule in Skin Substitutes
causes Cancer

ABP Products Parallel, organized fibres similar to that of skin

Porosity is ~ 20 microns similar to
native product ideal for cell infiltration

IDEAL

Other Products Spongy condition does not yield native structure

Porosity is ~ 400 microns not conducive
for cell infiltration & tissue regeneration

LESS BIOACTIVE
